

## Vim script links

This table lists the URLs found in the current scripts of the runtime files. Usually you can find the latest version with this link.

To use a file put it in the subdirectory of \$VIMRUNTIME where it belongs. E.g., the vim.vim syntax file goes into \$VIMRUNTIME/syntax and the vim.vim indent script goes into \$VIMRUNTIME/indent. To find out the value of \$VIMRUNTIME use this Vim command:

```
:echo $VIMRUNTIME
```

You can put a file in your own Vim runtime directory (~/.vim), but don't forget to delete it when upgrading Vim!

autoload script	\$VIMRUNTIME/autoload/
clojurecomplete	<a href="https://github.com/guns/vim-clojure-static">https://github.com/guns/vim-clojure-static</a>
phpcomplete	<a href="https://github.com/shawncplus/phpcomplete.vim">https://github.com/shawncplus/phpcomplete.vim</a>
